Quality Petroleum Hydrodynamics and DST Interpretations

NEW PROJECTS FOR 2008

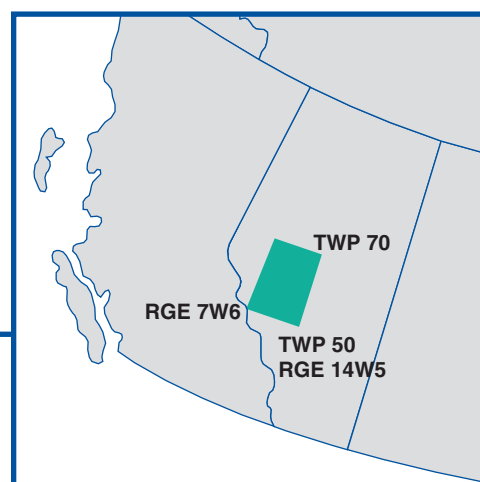

## *Triassic Montney Formation – West Central Alberta*

TOWNSHIPS 50-70, RANGES 14W5-7W6M

This project is a major update of WARD'S 1996 MONTNEY study, which led to the discovery of several significant Montney pools. Between the advent of horizontal drilling and completion technology, and the complex reservoir nature of the Montney, the detailed analyses of the pressure and fluid data is even more critical. This evaluation defines the reservoir continuities, effective permeabilities and new play concepts with many by-passed wells and pool extensions.

Included with the study are a technical report, a compilation of data and a new map suite. The map suite consists of: (all available on CD)

- Pool Delineation Map
- Pressure vs. Elevation Graph
- Play Concept Map
- C<sub>1</sub> & H<sub>2</sub>S Gas Chemistry Maps
- Oil Gravity Map
- Water Chemistry Map

### *Availability and Cost*

Available September 25, 2008

Pre-Subscription Cost: \$15,000.00 plus GST

After Nov. 15/08 Cost: \$25,000.00 plus GST
